

Swaham Pitambar Patra

Practiced Simple Linear Regression using Scikit-Learn.

Practiced Logistic Regression using Scikit-Learn.

```
1 # Importing libraries
2 import numpy as np
3 from sklearn.linear_model import LogisticRegression
4
5 # Initialization Data
6 X = np.array([12,33,21,34,54,64,76]).reshape((-1,1))
7 y = np.array([0,0,0,0,1,1,1])
8
9 # Calling the Algorithm and creating fit model
10 logr = LogisticRegression().fit(X,y)
11
12 # Predict from custom input
13 predicted = logr.predict(np.array([20,31,42,79]).reshape(-1,1))
14
15 # Print the prediction
16 print(predicted)
```
