Week	Day	Date	Discussion Topics / Activity	Details of Work Allotted Till Next Session / Corrections Suggested / Faculty Remarks	Signature of Industry Mentor
Week 01	Monday	01-06-2026	Introduction to Python + DS Internship Overview of internship structure, daily schedule, and expectations.	Ensure 100% attendance in all sessions.	
	Tuesday	02-06-2026	Covered Python fundamentals: History of Python, Features of Python, Installing Python & Running a Program, Debugging Programs, Difference Between {}, [], (), Values and Data Types, Variables and Variable Naming Rules, Assigning Values to Variables, Python Keywords, Type Conversion in Python.	<u>Complete 3 tasks:</u> 1. Personal Information Program (Name, Age, College, Percentage + type conversion) 2. Data Type Explorer (int, float, str, bool, complex + conversions) 3. Python Concepts Showcase (8+ valid variables, 5 invalid with reasons, List, Tuple, Dictionary + comments on {}, [], ())	
	Thursday	04-06-2026	Covered Operators in Python: What is Operator, Different Types of Operators, Expressions with Examples, IDLE (Interactive & Script Mode), Conditional Statements - If, If-Else, Nested If-Else, Elif Ladder, Logical Operators.	<u>Execute and document all programs demonstrated in lecture:</u> If Statement If-Else Statement If-Elif-Else Statement Nested If Logical Operators	
	Friday	05-06-2026	None (No Lecture)	<u>Tasks Assigned:</u> Task 1: Write a Python program to check if the entered number is negative or zero. Task 2: Write a Python program that asks for user input and checks whether the number is even or odd. Task 3: Write a Python program to take score as input and handle invalid values. Task 4: Write a Python program to check for negative even and negative odd numbers. Task 5: Write a Python program using or operator to check if the number is less than 5 or greater than 15.	
	Saturday	06-06-2026	<u>Topics Covered:</u> Installation of Python IDE and Jupyter Notebook. Introduction to Data Analytics. Phases and Process of Data Analytics.	Assignment: Create a simple calculator program in Python. The program should display options (1. Addition, 2. Subtraction, 3. Multiplication, 4. Division), accept user choice and two numbers, perform the selected operation, and display the result. Show "Option selected is not available" for invalid choices.	
	Sunday	07-06-2026	<u>Topics Covered:</u> Different types of data formats Data analytics workflow Real example workflow Introduction to NumPy Introduction to Matplotlib	Execute all the programs covered in today's session.
